

- *As a user, I want to be able to select which currency I want to use when planning.*
- User opens the app
- User logs in using log-in page
- User clicks on the currency page
 - the user can use a drop down to select a current currency
 - the user uses another drop down to select a target currency
 - the user inputs a currency amount (a budget)
 - user clicks translate and this this budget value is translated into the target currency
- if the user leaves the page, translation values are lost and the drop down menus as well as the budget goes back to default
- user can specify a default “current” currency in the profile page
 - user can use a drop down menu to change this default value, which will be saved into the database
 - the next time user goes to translate currency, this default currency will always start as the “current” currency
